Different pages/components:
Alyssa (Insert zipcode, dietary restriction, and goals to output personalized recipes):
Final Meal planner component - Google Colab
Meal plan component Health App Demo - Thunkable
Shreya (Exercise based on concerns and symptoms):
ExerciseRecommender.ipynb
Exercise page and Home Page demo - Thunkable
Meher (Input zipcode, output nearby grocery stores and their affordability):
Finished Health App Zip codes page - Thunkable

Goal: Our app makes healthy eating options and exercise accessible to all:

- Focusing on budgeting (creating an affordable healthy diet)
- convenience (reusing leftovers and getting necessary ingredients at the nearest grocery stores)
- food literacy (teaching and raising awareness about the importance of healthy eating)

Target audience:
People living in communities who experience poor health outcomes due to poverty or lack of education and people who are looking to eat/exercise and become healthy on a budget.

App components:

- Page with three options - nearby grocery store, meal plan, exercise
- Meal plan: Creates a personalized meal plan based on dietary restrictions and goals
- Grocery store page: shows grocery stores in the region given zipcode
- Exercise: asks for target concerns and then gives exercises and recommendations

Thunkable design formats:
